

Typical Anchor Layout: 20' by 40' cable anchor dome, **4' radius corners**. Recommended anchors: Red Head brand, type J-38. Recommended Eyebolts: 3/8" diameter, standard thread, shortest shaft possible.

Notes:

1. First anchor from corner should be 4'-0" from corner.
2. Distance between anchors not to exceed 3'-6".
3. Zipper should be centered between two anchors!!
4. The close off (where the cable is spliced) should also be centered between anchors to relieve stress at that point. This is very important in reducing strain on the zipper!!
